2016-2017**

COURSE STRUCTURE FOR P.G. PROGRAMMES
M.TECH.NANO TECHNOLOGY

I Year

I Semester	Code	New Title	Int. marks	Ext. marks	L	P	C
Core Course I	NT101	Properties of Nano Structures	25	75	4	--	4
Core Course II	NT102	Synthesis of Nanomaterials	25	75	4	--	4
Core Course III	NT103	Spectroscopic, Electrical, Thermal and Magnetic Characterization Techniques	25	75	4	--	4
Core Elective -I	NT 104	1. Characterization Techniques on Surface & Elemental Analysis 2. Surface sciences and advanced catalysis	25	75	4	--	4
Core Elective-II	NT105	1. Structure, Bonding and Quantum Mechanics 2. Introduction to Nano Science and Nano Technology	25	75	4	--	4
Open Elective -I	NT106	1. Nano Bio Technology, Materials & Devices 2. Numerical Methods and Advanced computing	25	75	4	--	4
Laboratory I	NT107	Synthesis, Characterization & Simulation Lab-I	25	75	--	6	2
Seminar I			50	50	--	4	2
	Total		225	575	24	10	28

II Semester	Code		Int. marks	Ext. marks	L	P	C
Core Course IV	NT201	Nano Sensors and Devices	25	75	4	--	4
Core Course V	NT202	Science and Technology of Thin Films	25	75	4	--	4
Core Course VI	NT203	Nano Electronics and Nano Photonics	25	75	4	--	4
Core Elective-III	NT204	1. Nano Composites Design & Synthesis 2. Polymer nanocomposites	25	75	4	--	4
Core Elective-IV	NT205	1. Carbon Nanostructures and its Applications 2. Nanotechnology For Energy Systems	25	75	4	--	4
Open Elective -II	NT206	1. MEMS and NEMS Design and Applications 2. Lithographic Techniques	25	75	4	--	4
Laboratory II	NT207	Fabrication, characterization & Simulation Lab-II	25	75	--	6	2
Seminar II			50	50	--	4	2
	Total		225	575	24	10	28

II Year

I Semester		Int. marks	Ext. marks	L	P	C
1.	Comprehensive Viva	0	100	--	--	4
2.	Seminar-I on Project Work	50	--	--	24	12
	Total	50	100	--	24	16

II Semester		Int. marks	Ext. marks	L	P	C
1.	Project Work Review II	50	--	--	8	4
2.	Project Evaluation (Viva-voce)	--	150	--	16	12
	Total	50	150	--	24	16

NT101 PROPERTIES OF NANOSTRUCTURES

Objective: To bring out the distinct properties like electrical, magnetic, optical, thermal and mechanical properties of nanostructures.

Outcome of the study:

1. To familiarize about the various properties of nanostructures.
2. To bring out the differences between nano and macro structures.
3. To discuss applications and specific properties of nanomaterials.

Pre visit Request:

1. Familiarization on energy band gap
2. Basics physics & mechanics of solids

Unit-I: Electronic properties, Energy bands and gaps in semiconductors, Fermi surfaces, localized particle, donors, acceptors, deep traps, excitons, mobility, size dependent effects, conduction electrons and dimensionality Fermi gas and density of states, semiconducting nanoparticles.

Unit-II: Magnetic properties, Introduction of magnetic materials, basics of ferromagnetism – ferro magnetic resonance and relaxation, magnetic properties of bulk nanostructures, magnetic clusters, dynamics of nanomagnets, nanopore containment of magnetic particles, nano carbon ferromagnets, ferrofluids, electron transport in magnetic multilayers.

Unit-III: Optical properties, Photonic crystals, optical properties of semiconductors, band edge energy, band gap, Core-shell nanomaterials, Quantum dots etc., for size influences of optical properties, optical transitions, absorptions, interband transitions, quantum confinements, Fluorescence/luminescence, photoluminescence/fluorescence, optically excited emission, electroluminescence, Laser emission of quantum dot, Photo fragmentation and columbic explosion, luminescent quantum dots for biological labeling.

Unit-IV: Thermal properties of nanostructures- thermal conductivity measurements for nanowires, nanotubes, thin films.

Unit-V: Mechanical Properties of nanomaterials, Types of indentation: Oliver & Pharr, Vickers indentation process, Nano Indentation by AFM, Young's modulus, Contact angle, Scratch implant measurements.

Text & Reference books:

1. Introduction to Nano Technology by Charles. P. Poole Jr & Frank J. Owens. Wiley India Pvt. Ltd.
2. Solid State physics by Pillai, Wiley Eastern Ltd.
3. Introduction to solid state physics 7th edition by Kittel. John Wiley & sons (Asia) Pvt Ltd.
4. Nano Technology and Nano Electronics – Materials, devices and measurement
5. Techniques by WR Fahrner – Springer
6. Encyclopedia of Nano Technology by M.Balakrishna Rao and K.Krishna Reddy, Vol I to X Campus books.
7. Nano Technology - Science, innovation and opportunity by Lynn E. Foster. Prentice Hall Pearson education.
8. Hand book of Nano structured materials Vol I & V
9. Encyclopedia of Nano Technology by H.S.Nalwa

Journal references:

NT102 SYNTHESIS OF NANOMATERIALS

Objective:

This course is intended to cover the two groups of synthesis of nanostructures namely top-down and bottom-up approach various synthesis methods, including biological methods, advantages and disadvantages etc.

Outcome of the study:

1. The students will be exposed to various structure specific synthesis methods, their advantages etc.
2. To know about Top-down to Bottom up approach techniques.
3. To optimize the methods for specific material applications.

Pre visit Request:

1. Basic chemistry fundamentals
2. Basics physics fundamentals

Unit-I: Introduction to synthesis of nanostructure materials, Bottom-up approach and Top-down approach with examples.

Unit-II: Physical methods: Inert gas condensation, Arc discharge, RF-plasma, electric explosion of wires, ball milling, molecular beam epitaxy, Chemical methods: Nanocrystals by chemical reduction, photochemical synthesis, electrochemical synthesis, co-precipitation method, Nanocrystals of semiconductors and other materials by arrested precipitation, emulsion synthesis, sonochemical routes, microwave assisted synthesis, Template based synthesis of nanomaterials.

Unit-III: Thermolysis route - spray pyrolysis and solvated metal atom dispersion, sol-gel method, solvothermal and hydrothermal routes, solution combustion synthesis, Chemical vapor synthesis.

Unit-IV: Biological methods – use of bacteria, fungi, actinomycetes for nano-particle synthesis- magnetotactic bacteria for natural synthesis of magnetic nano-particle, role of plants in nanoparticle synthesis, Synthesis of dendrimers, Immobilisation

Unit-V: Scale-up of nanomaterial synthesis: Nano clay particles, Micro reactor based synthesis: micro emulsions, colloid solutions, Health effects.

Textbooks:

1. Inorganic Materials Synthesis and Fabrication by J.N. Lalena, D.A. Cleary, E.E. Carpenter, N.F. Dean, John Wiley & Sons Inc.
2. Introduction to Nano Technology by Charles P. Poole Jr and Frank J. Owens. Wiley India Pvt Ltd.
3. The Chemistry of nanomaterials: Synthesis, Properties and Applications, Vol-I by C.N.R. Rao, A. Muller and A.K. Cheetham
4. The Physics of Micro/Nano- Fabrication by Ivor Brodie and Julius J. Murray

Reference books:

1. Encyclopedia of Nanotechnology by M. Balakrishna Rao and K. Krishna Reddy, Vol I to X, Campus books.
2. Encyclopedia of Nanotechnology by H.S. Nalwa

3. Nano: The Essentials – Understanding Nano Science and Nanotechnology – by T.Pradeep; Tata Mc.Graw Hill
4. Joy deep Dutta-Scale-up of nano materials

NT-103 SPECTROSCOPIC, ELECTRICAL, THERMAL AND MAGNETIC CHARACTERIZATION TECHNIQUES

Objective:

To familiarize students with Spectroscopic, Electrical, Thermal and Magnetic characterization techniques and interpretation of results including standards etc.

Outcome of the study:

1. To bring out the importance of material characterization and various methods.
2. To familiarize about various equipments.

Pre visit Request:

1. Basic band gap, Electrical, Thermal and Magnetic characterization.
2. Mechanics of solids, metallurgy and materials science, and spectroscopic techniques.

Unit-I: Introduction to Absorption, Emission, Molecular & Atomic spectroscopy: Terms Employed in Absorption Spectroscopy, Quantitative Aspects of Absorption Measurements, Emission Spectra, Sources, Instruments, Applications of Emission Spectroscopy. Theory of Fluorescence, Instruments, Applications. Theory of Flame Spectroscopy, Characteristics, Atomizers for Atomic Spectroscopy, Electron spectroscopy.

Unit-II: UV-VIS-NIR Spectroscopy: UV/Vis spectroscopy, infrared spectroscopy (FTIR), EDS, WDS, X-ray fluorescence (XRF), luminescence spectrometer, Mossbauer spectroscopy, Circular dichroism spectroscopy, X-Ray Photoelectron Spectroscopy (XPS), Ultraviolet Photoelectron Spectroscopy (UPS), Auger Electron Spectroscopy(AES).

Unit-III: Raman, NMR & Mass spectroscopy: Theory of Raman Spectroscopy, Instrumentation, Applications of Raman Spectroscopy, micro Raman & laser Raman. Theory of Nuclear Magnetic Resonance, Experimental Methods, Applications, Electron Spin Resonance Spectroscopy, Mass Spectrometer, Mass Spectra, Qualitative Applications of Mass Spectrometry. Secondary ion mass spectrometry (SIMS).

Unit-IV: Electrical Characterization Techniques: Measurement of resistivity by 4-prob method, Hall measurement, impedance measurements, Sebec coefficient measurements, Basics of Nano indentation techniques, electron beam induced current measurement (EBIC).

Unit-V: Thermal and Magnetic Characterization: Thermal analysis, Principle, Working and application of DTA, TGA, TMA and DSC. Vibrating Sample Magnetometer (VSM), SQUID magnetometer.

Textbooks:

- 1.Nano: The Essentials -Understanding Nano Science and Nanotechnology by T.Pradeep, Tata Mc.Graw Hill
- 2.Introduction to Nano Technology by Charles. P. Poole Jr and Frank J. Owens,
3. Characterization of nanostructured materials by Z.L. Wang
4. Modern Raman Spectroscopy: A practical approach by E. Smith and G.Dent
5. Principles of Instrumental analysis by D.A. Skoog, F.J. Hollen and T.A. Nieman

Reference Books:

- 1.Nanotechnology : Principles and Practices – Sulabha K. Kulkarni – Capital Publishing Comany
2. Photoelectron spectroscopy by JHD Eland, Butterworth & Co. publishers, 2nd education.

3. Encyclopedia of Nanotechnology by H.S. Nalwa

4. Encyclopedia of materials Characterization C. Richard Brundle and Charles A. Evans, Jr.

NT-104 CHARACTERIZATION TECHNIQUES ON SURFACE & ELEMENTAL ANALYSIS

Objective:

The course covers the importance of characterization techniques, surface analysis and elemental analysis.

Outcome of the study:

1. To bring out the importance of material characterization on surface of Nanomaterials.
2. To familiarize about elemental characterization of nanomaterials.

Pre visit Request:

1. Basic band gap, energy systems
2. Mechanics of solids, metallurgy and materials science.

Unit-I: Diffraction Techniques: properties of x-rays, The directions of diffracted beams, Atomic scattering factor, Crystal structure factor, Debye-Scherrer method, crystal size, Electron and Neutron diffraction.

Unit-II: Microscopic Techniques: Optical Microscopes, Confocal Microscope, Light Microscopy, Electron Microscope, Scanning Electron Microscopy (SEM), Transmission Electron Microscope (TEM), Scanning Transmission Electron Microscopy (STEM).

Unit-III : Probe Microscopic Techniques: Scanning Probe Microscope (SPM), Scanning Tunneling Microscope (STM), Atomic Force Microscope (AFM), Scanning Near Field Optical Microscope (SNOM), Scanning Force Microscope (SFM).

Unit-IV: Elemental analysis Techniques: Electron probe microanalysis (EPMA). Energy Dispersive X-ray analysis (EDAX), Ion beam techniques: SIMS & RBS, ICPMS, ISPOS, Oxygen analysis-inert gas fusion analysis.

Unit-V: Advanced Surface analysis Techniques: XPS, UPS, AES, DLS, PSA and Zeta potential, BET: pore size and distribution.

Text Books:

1. Nano: The Essentials -Understanding Nano Science and Nanotechnology by T.Pradeep, Tata Mc.Graw Hill
2. Introduction to Nano Technology by Charles. P. Poole Jr and Frank J. Owens, Wiley India Pvt Ltd.
3. A practical approach to X-Ray diffraction analysis by C.Suryanarayana
4. Scanning electron microscopy and x-ray microanalysis by J.I. Goldstein
5. Characterization of nanostructured materials by Z.L. Wang

Reference Books:

1. Nanotechnology : Principles and Practices – Sulabha K. Kulkarni – Capital Publishing Company.
2. Elements of X-ray diffraction by B. D. Cullity.
2. Specimen preparation for Transmission Electron microscopy by John & Bravmno et al, published by MRS

3. Encyclopedia of Nanotechnology by H.S. Nalwa
4. Encyclopedia of materials Characterization C. Richard Brundle and Charles A. Evans, Jr.

NT 104 SURFACE SCIENCES AND ADVANCED CATALYSIS

Objective:

The course covers the importance of adsorption principles, various catalyst methods and alternate energy sources.

Outcome of the study:

1. Adsorption isotherms and principle of Catalyst types and ranges will be covered.
2. Various alternate energy sources for environmental protection

Pre visit Request:

1. Basics of Adsorption techniques
2. Basics of Energy Sources

Unit-I Adsorption phenomenon: Chemisorption & Physisorption, adsorption isotherms and methods of determination of pore size and surface area of materials using the adsorption isotherms, Catalysis – Definition, types of catalysis with suitable examples, characteristics of a catalyst, selectivity or specificity of the catalyst, activation and deactivation of catalysts, catalytic poisoning

Unit-II Necessity for the alternate energy sources and the role of catalytic technology in the energy sector – Fuel cells, Solar cells, Biomass and Biofuels, New trends in heterogeneous catalysis – catalytic sensors, membrane and monolithic reactors

Unit-III Catalysis in environmental protection & green process- Industrial catalytic wet air oxidation processes, water purification, synthesis of speciality, commodity and fine chemicals, catalysis in automobiles : catalytic converter applications

Unit-IV Important catalytic materials – Nanostructured metals like Pt, Pd and Fe, nanostructured ceramics like silica, silicate and alumina, pillared clays, colloids and porous materials (viz. mesoporous materials)

Unit-V Mesoporous materials – Introduction, synthesis & characterization, properties and applications (with suitable examples), unipore size, bimodal pore size, graphs., supramolecular chemistry, synthesis (micelar rods).

Text Books & References

Muller & AK Cheetham

1. Basic principles in applied catalysis – Manfredlaerns
2. Nanotechnology in Catalysis – Pinzhan
3. Introduction to Nanotechnology – Charles P Poole Jr & Frank J Owens
4. Nanoscale Materials –LM Liz Marzan & Prashant V. Kamat
5. Nanostructured catalysts – SL Scott, CM Crudden & CW Jones
6. Concepts of Modern Catalysis & kinetics - I. Chorkendorff, J.W. Niemantsverdriet
7. Chemistry of Nanomaterials: Synthesis, properties & applications, Volume-I – CNR Rao, A

NT105 STRUCTURE, BONDING AND QUANTUM MECHANICS

Objective:

The course is intended to cover, basics concepts of crystallography, quantum mechanics, matter and energy relations, de-Broglie hypothesis, wave function analogies, Schrodinger equation, quantum dot, wires and wells etc.

Outcome of the study:

1. To know the importance of crystal structures for property evaluation.
2. Students without quantum mechanics back ground will be able to understand the concept of quantum mechanics and nanotechnology.
3. To evaluate nanostructures in quantum mechanical approaches.

Pre visit Request:

1. Basics physics
2. Quantum mechanics
3. Basic chemistry
4. Basic material science

Unit-I: Crystal structure: Crystalline and amorphous solids- Crystal lattice and crystal structure- Translational symmetry-space lattice-unit cell and primitive cell-symmetry elements in crystal-the seven crystal systems-some imperfections in crystals-Wigner-seitz cells-Miller indices-Miller-bravais indices-Indices of a lattice direction-The spacing of a set of crystal planes.

Unit-II: Reciprocal lattice and crystal imperfections: Bragg law- Reciprocal lattice – Properties of Reciprocal lattice- Reciprocal lattice of simple cube- Reciprocal lattice of bcc- Reciprocal lattice of fcc- diffraction conditions- Brillouin zones. Importance of lattice imperfections- types of imperfection-Point defects-dislocations.

Unit-III: Introduction-Why quantum mechanics - matter waves-length scales - De-Broglie hypothesis – wave particle duality- Heisenberg’s uncertainty principle-Schrodinger wave equation – General postulates of Quantum mechanics- particle in one dimensional box, Bohr’s correspondence principle.

Unit-IV: Quantum mechanics of electronics: Electron as particle and electron as wave-Time independent Schrodinger equation and boundary condition on the wave function-Analogies between quantum mechanics and classical electromagnetic theory-Probabilistic current density-multiple particle systems.

Unit-V: Free and confined electrons: Free electrons-the free electron gas theory of metals-electrons confined to bounded region of space and quantum numbers-electrons confined to atom-the hydrogen atom and the periodic table-quantum dots-wires-wells.

Textbooks:

1. An introduction to solid states electronic devices by Ajay kumar saxena Macmillan India Ltd {Unit-I, II}
2. Solid state Physics by Kittel {Unit-I,II}
3. P.M.Mathews and K.Venkatesan, “A textbook of Quantum Mechanics”, Tata McGraw Hill Publishing Company Ltd {Unit-III}
4. Quantum Mechanics – Schiff {Unit-III}

5. Quantum Mechanics by B.k.Agarwal and Hariprakash, PHI {Unit-III}
6. Fundamentals of nanoelectronics by George W.Hanson Pearson education {Unit-IV,V}

Reference Books:

1. Introduction to Nanotechnology by Charles P.PooleJr& Frank J. Owens;Wiley India Pvt. Ltd
2. The Feynman lectures on Physics; Vol I to III
3. Quantum mechanics by Bransden&Joachim
4. J.J.Sakurari, "Modern Quantum Mechanics Mc.Graw Hill, Addison Wesley Longman Inc., USA, 1999
5. Nano Technology and Nano Electronics – Materials, devices and measurement Techniques by WR Fahrner – Springer
6. Nano Technology – science, innovation and opportunity by Lynn E Foster;Prentice Hall - Pearson education.
7. Hand book of Nano structured materials; Vol I to V Bio Ethics Readings and cases by Branch A.Brody&H.TristramEngelhardt.Jr; Pearson Education
8. Quantum mechanics: - Pawling & Wilson
9. Quantum physics by A.Ghatak
10. Introduction to quantum chemistry by A.K.Chanda

NT105 INTRODUCTION TO NANOSCIENCE & NANO TECHNOLOGY

Objective:

To familiarize students with basics of nanoscience and technology, Nanobiotechnologies and Nanomaterials for environmental and toxicology.

Outcome of the study:

1. To know the importance of Nanomaterials for environment and biological applications.
2. To study about the need of Nanotechnology for biology and environment.

Pre visit Request:

1. Basic physics fundamentals
2. Basic chemistry fundamentals
3. Basic material science

Unit-I: Background of Nanotechnology

Scientific Revolutions, Nanotechnology and Nanomachines, The Periodic Table, Atomic Structure, Molecules and Phases, Energy, Molecular and Atomic size, Surfaces and Dimensional Space, Top down and Bottom up approach.

Unit-II: Nanobiotechnologies: Concept-Structural principle of Bionanotechnology-Classification of Nanobiotechnologies -Micro- and Nanoelectromechanical Systems- Function of Biological Nanomolecules-DNA computers and DNA microprocessors- Biotechnology based genetic engineering -Function of Biological Nanomolecules- Bionanomachines in Action. Drug deliveries - Targeting Ligands based Drug Delivery- Cancer Treatment- Mediated Delivery - Tissue Regeneration, Growth and Repair, Tissue Bioengineering.

Unit-III: Nano Materials For Environment And Toxicology : Green nanotechnology and its principles, Nano-convergence and Environmental Engineering, different environmental systems, Potential impacts of nanomaterials on organisms and ecosystems, Environmental applications, Nanotechnology and Our Energy Challenge of nanomaterials, Nanotechnology and Renewable Energy, Introduction to toxicology, principles of toxicology, dosage-Response curve, classification of toxicity, factors affecting toxicity, LC50, LD 50, Air borne Particles,

Unit-IV: Nanoelectronics

Approaches to nanoelectronics, Fabrication of integrated circuits, MEMS, NEMS, Nano circuits, Quantum wire, Quantum well, DNA-directed assembly and application in electronics.

Unit-V: Applications

MEMS, NEMS, Coatings, Optoelectronic Devices, Environmental Applications, Nanomedicine.

NT106 NANO BIO-TECHNOLOGY-MATERIALS AND DEVICES

Objective:

The course is intended to cover fundamental terms and basics of biotechnology and building blocks; biological nanostructures, biosensors and biomedical applications of nanotechnology, nanodrugs and drug delivery systems.

Outcome of the study:

1. To familiarize students with biological systems, materials, sensors and building blocks.
2. To familiarize about biomedical applications, nanodrugs, molecular modeling of drugs and drugs delivery systems

Pre visit Request:

1. Basics of organic chemistry
2. Basics of Biology

Unit-I: Fundamentals terms in biotechnology, Biological building blocks: Sizes of building blocks and Nanostructures, nucleic acids, genetic code and protein synthesis, Enzymes, DNA double nano wires, protein nanoparticles and polypeptide nanowires .

Unit-II: Biological Nanostructures: Bio-mimetics with examples, Bio mineralization, Bio compatible Bio sensors, Examples of proteins, micelles, vesicles, bilayers, and Multilayer films, application of bio- nanotechnology: bio nano machines, molecular modeling.

Unit-III: Nano bio-sensors and biomedical applications, organic semiconductors, biological neurons and their functions, bio-chemical and quantum mechanical computers: DNA computers, parallel processing, Bit and 'Q' bit, Quantum parallelism.

Unit-IV: Biomolecular sensing for cancer diagnostics using carbon nanotubes, nano devices in biomedical applications, nanoscale polymer fabrication for biomedical application, nanotechnology in cancer drug therapy: A biocomputational approach.

Unit-V: Introduction to drugs, Classification of drugs, Encapsulation of drugs, Nano drug delivery: Conventional drug delivery, targeted drug delivery, chemistry of drug delivery, role of nanotechnology in drug delivery, bionanoimaging, magnetic nanoparticles for MR imaging, Magnetic hyperthermia in cancer treatment.

Text books:

1. Bio Nano Technology by Good Sell, Wiley Liss
2. Nanotechnology by John F. Mongillo
3. Introduction to Nanotechnology by Charles. P.PooleJr and Frank J. Owens, Wiley India Pvt Ltd.
4. Nano Technology, A gentle introduction to the next big idea by Mark Ranter and Daniel Ranter, Pearson education
5. Nanotechnology – science, innovation and opportunity by Lynn E Foster, Prentice Hall – Pearson education.
6. Biological and Biomedical nanotechnology by Abraham P.Lee and L.James Lee
7. Biomedical Applications of Nanotechnology by VinodLabhasetwar and Diandra L. Leslie - Pelecky
8. Biomedical Nanostructures by Kenneth E.Gonsalves, Craig R. Halberstadt, Cato T. Laurencin, Lakshmi S.Nair
9. Sensors, Nanoscience, Biomedical, Engineering and Instruments by RichardC.Dorf

Reference books:

1. Encyclopedia of Nanotechnology by H.S.Nalwa
2. Encyclopaedia of Nanotechnology by M.BalakrishnaRao and K.Krishna Reddy (Vol I to X),

NT106 NUMERICAL METHODS AND ADVANCED COMPUTING TECHNIQUES

Objective:

The course is intended to cover, basics concepts of mathematics like numerical algebra, probability, simulations specially Monte- Carlo simulations which will help in understanding theoretical concepts of Nanotechnology.

Outcome of the study:

1. To know the importance of simulations in nanotechnology.
2. Students without mathematics back ground will be able to understand the concept of mathematics.
3. To evaluate nanostructured simulations in nanotechnology.

Pre visit Request:

1. Basics differential equations
2. Basics simulation
3. Basic Gaussian eliminations
4. Basic probability functions
5. Basics engineering mathematics probability & statistics

Unit – I Numerics in general: Interpolation, Gauss elimination, Solution by iteration, least square method.

Unit - II Numeric Linear Algebra and differential equations: Matrix Eigen value problems: Introduction, Inclusion of Matrix Eigen values, Tridiagonalization and RQ factorization. Methods for first order ODEs, Multi step methods, Higher order ODES

Unit-III Introduction to probability: Probability, Sample space and events- Probability- the axioms of probability, some elementary theorems-conditional probability Baye's theorem Random Variables- Discrete and continuous – distribution- distribution function Distribution Binomial and poison distributions and normal distribution – related properties, Neural networks.

Unit- IV Systems, Models, Simulations and the Monte Carlo Methods:Systems,Models,Simulation and the Monte Carlo Methods, Random number generation, Introduction, Congruential Generators, Statistical Tests of Pseudorandom Numbers, Random variate generation, inverse Transform Method, Composition Method, Acceptance-Rejection Method,

Unit-V Monte Carlo integration and Variance reduction techniques: Introduction, Monte Carlo Integration, The Hit or Miss Monte Carlo Method, The Sample-Mean Monte Carlo Method, Efficiency of Monte Carlo Method, Integration in Presence of Noise,

Text books:

1. Advanced engineering mathematics, by Erwin Kreyszig, wiley publications
2. Probability and statistics, scham series, Arnold o. allen, academic press
3. Probability and statistics, Arnold o. allen, academic press
4. Probability and statistics for engineers, miller and john e. freund, prentice hall of india
5. A primer for the monte carlo method, Ilya M. Sobol' CRC Press
6. Simulation and monte carlo method by reuven y. rubisten
7. The monte carlo method, popular lectures in mathematics by sobol.i.m

NT107 SYNTHESIS, CHARACTERIZATION AND SIMULATION LAB-I

Objective: The course is intended to cover basic preparation methods of nanomaterials and molecular modeling of nanostructures.

The outcome of the study is:

1. To familiarize students with preparation of nanomaterials in lab scale using various synthesis techniques.
2. To familiarize students with molecular modeling and graphics.

Pre visit Request:

Pre visit Request: Basic chemistry, synthesis techniques characterization and modeling of nanostructures

PART-A: SYNTHESIS AND CHARACTERIZATION

1. Verification of BEER-LAMBERT's law using Colorimeter
2. Conductometry
3. Preparation of Cobalt nanoparticles by wet chemical reduction method
4. Synthesis of CuO nanoparticles using Glycine as fuel by Solution combustion method
5. Synthesis of ZnO nanoparticles using Ascorbic acid as fuel by Solution combustion Method
6. Synthesis of MgO nanoparticles using Glycine as fuel by Solution combustion method
7. Synthesis of Fe₂O₃ nanoparticles using Glycine as fuel by Solution combustion method
8. Synthesis of silica gel (SiO₂) using Sol-Gel method
9. Synthesis of PVP capped Cadmium Sulfide (CdS) nanoparticles by chemical Coprecipitation Method
10. Synthesis of oxide nanoparticles by using Multifuel solution combustion method
11. Synthesis of oxide nanoparticles by using Multioxidizer solution combustion method
12. Synthesis of colloidal copper nanoparticles by chemical reduction method
13. Synthesis of the silver nanoparticles by using green synthesis from ocium santum
14. Synthesis of the copper oxide nanoparticles by using green synthesis from Aloe vera
15. Determination of average crystalline size and microstarin by using X-Ray diffraction Analysis.
16. Determination of average particle size and zeta potential by using Dynamic light scattering.
17. Synthesis of Graphene oxide by using hummers method
18. Reduction of the Bulk material to Nanomaterial by using Planetary Ball-Mill

PART-B: SIMULATION

I. ARGUS LAB

1. Construction of fullerene & its energy calculations
2. Construction of Bucky balls (C₂₀, C₄₀, C₆₀, C₈₀, C₁₀₀, C₁₂₀)
3. Construction of Carbon nanotubes
4. Energy minimization of lysozyme and its mutant
5. Energy minimization of chymotrypsin and its mutant
6. Energy minimization of enzymes involved in Neurological science

II.MATLAB

1. Introduction to MATLAB Programming
2. Program assembly, Execution, Data processing and graphic analysis
3. Study of Fermi – Dirac distribution function
4. Introduction to symbolic math computations
5. MATLAB program to plot the one-dimensional rectangular potential well with infinite potential barrier
6. Introduction to Simulink and Simelectronics

NT201 NANO SENSORS AND DEVICES

Objective:

The course is intended to cover sensors and different types of sensors with their characteristics and their applications

Outcome of the study:

1. To know the importance of Nanosensors and devices for various applications.
2. To familiarize students with different types of sensors and their physical effects.

Pre visit Request:

1. Basics of nano liners optics and electronics
2. Basic of sensors, physical, chemical, mechanics phenomenon's related to sensors.

Unit-I: Introduction & Sensor Characteristics:

Nanotechnology, Sensors, Nanotechnology Enabled Sensors, Sensor Characteristics and Terminology, Static Characteristics, Dynamic Characteristics, Physical Effects Employed for Signal Transduction, adsorption studies.

Unit-II: Sensors & Physical Effects:

Photoelectric Effect, Photo-dielectric Effect, Photoluminescence Effect, Electroluminescence Effect, Chemiluminescence Effect, Doppler Effect, Barkhausen Effect, Hall Effect, Nernst/Ettingshausen Effect, Thermoelectric (Seebeck/Peltier and Thomson) Effect, Thermoresistive Effect, Piezoresistive Effect, Piezoelectric Effect, Pyroelectric effect, Magneto-Mechanical Effect (Magnetostriction), Magneto-resistive Effect, Faraday-Henry Law.

Unit-III: Mass-Sensitive & Conductivity Sensors: BAW Sensors, SAW Sensors

Conductometric Sensors, Resistive and Capacitive Gas Sensors, Gas Sensors Based on Polycrystalline Semiconductors, Gas Sensors Made of Polymers and Gels, Resistive and Capacitive Sensors for Liquids.

Unit-IV: Electrochemical Sensors:

Potentiometric Sensors, Selectivity of Potentiometric Sensor, Ion-Selective Electrodes, The Ion-Selective Field Effect Transistor (ISFET), Measurement with Potentiometric Sensors, Amperometric Sensors Selectivity of Amperometric Sensors, Electrode Design and Examples, Measurement with Amperometric Sensors, Sensors Based on Other Electrochemical Methods, Electrochemical Biosensors, Classes of Electrochemical Biosensors.

Unit-V: Thermometric & Optical Sensors:

Sensors with Thermistors and Pellistors, Pyroelectric Sensors, Sensors Based on Other Thermal Effects, Optical Fibres as a Basis for Optical Sensors, Fibre Sensors Without Chemical Receptors (Mediators), Optodes: Fibre Sensors with a Chemical Receptor, Optodes with Simple Receptor Layers, Optodes with Complex Receptor Layers.

Text Books:

1. Nanotechnology-Enabled Sensors, Kourosh Kalantar-zadeh, *Springer publications (2007)*
2. Chemical Sensors-An Introduction for Scientists and Engineers, Peter Gröndler, *Springer publications (2006)*

NT202 SCIENCE AND TECHNOLOGY OF THIN FILMS

Objective:

The course covers the importance of thin film technology and nanofabrication, vacuum technology, various physical and chemical methods of thin film a fabrication and various applications of thin films including sensors.

Outcome of the study:

3. Vacuum technology and principle of vacuum pumps- various types and ranges will be covered.
4. Various fabrication methods of thin films will be dealt in detail.
5. Advantages, applications of thin films for devices also will be discussed.

Pre visit Request:

3. Vacuum pump technology
4. Basics of vacuum pump technology Pirani and gauge technology

Unit-I: Vacuum technology: principles of vacuum pumps in range of 10^{-2} torr to 10^{-11} torr, principle of different vacuum pumps: roots pump, rotary, diffusion, turbo molecular pump, cryogenic-pump, ion pump, Ti-sublimation pump, importance of measurement of vacuum, Concept of different gauges: Bayet- Albert gauge, Pirani, Penning and pressure control.

Unit-II: Conditions for the formation of thin films: Environment for thin film deposition, deposition parameters and their effects on film growth, formation of thin films (sticking coefficient, formation of thermodynamically stable cluster – theory of nucleation), capillarity theory, microstructure in thin films, adhesion, properties of thin films: Mechanical, electrical, and optical properties of thin films, few applications of thin films in various fields. Application to Renewable energy technology – Thin film solar cells, Quantum well and Quantum dot solar cells, dye – sensitized solar cells.

Unit-III: Physical Vapor Deposition techniques: Thermal evaporation, resistive evaporation, Electron beam evaporation, Laser ablation, Flash and Cathodic arc deposition, Electron beam and Ion beam lithography techniques

Unit-IV: Electrical discharges used in thin film deposition: Sputtering, Glow discharge sputtering, Magnetron sputtering, Ion beam sputtering, Ion plating, difference between thin films and coating.

Unit-V: Electro deposition, molecular beam epitaxy and laser pyrolysis. Chemical vapor deposition techniques: Advantages and disadvantages of Chemical Vapor deposition (CVD) techniques over PVD techniques, reaction types, boundaries and flow, Different kinds of CVD techniques: Metallorganic CVD (MOCVD), Plasma Enhanced CVD (PECVD), thermally activated CVD, CVD, Spray pyrolysis, etc.

NT203 NANO ELECTRONICS AND NANO PHOTONICS

Objective:

This course is intended to cover basics of electronics, transistor, band structure models, nanocapacitors, coulomb blockade, single electron transistor and nanophotonics.

Outcome of the study:

1. To know nanoelectronics holds the capacity for mass production of high-quality nanodevices with an enormous variety of applications from computers to biosensors, from cell phone to space shuttles and from large display screens to small electronic toys.
2. To know the scaling of transistors and other devices to smaller and smaller sizes, which has provided the basis for this exponential growth, has limits, physical (size of the atoms), technological (lithography) and economic, which will be reached by nanoelectronics in the next coming decade.
3. In the near future from photonics, molecular electronics or revolutionary engineering solutions, such as departure from two-dimensional ICs on the surface of silicon wafers to three-dimensional structures. All these gigantic challenges and potential nanotechnology solutions are actively debated.

Pre visit Request:

1. Basics of nano linear optics and electronics

Unit-I: Single-electron and few-electron phenomena and devices: Tunnel junction and applications of tunneling, Tunneling Through a Potential Barrier, Potential Energy Profiles for Material Interfaces, Metal—Insulator, Metal-Semiconductor, and Metal-Insulator-Metal Junctions,

Unit-II: Applications of Tunneling; Field Emission, Gate—Oxide Tunneling and Hot Electron Effects in MOSFETs, Theory of Scanning Tunneling Microscope, Double Barrier Tunneling and the Resonant Tunneling Diode.

Unit-III: Coulomb Blockade: Coulomb Blockade, Coulomb Blockade in a Nanocapacitor, Tunnel Junctions, Tunnel Junction Excited by a Current Source, Coulomb Blockade in a Quantum Dot Circuit.

Unit-IV: The Single-Electron Transistor: The Single-Electron Transistor Single-Electron Transistor Logic, Other SET and FET Structures, Carbon Nanotube Transistors (FETs and SETs), Semiconductor Nanowire FETs and SETs, Molecular SETs and Molecular Electronics.

Unit –V: Spintronics: Spintronics and Foundations of nano-photonics.

NT204 NANO COMPOSITES DESIGN AND SYNTHESIS

Objective:

This course intended to cover nanocomposites, reinforcing nanostructures dispersed in various matrix materials like polymers, ceramics, metals, etc.,. The subject covers mainly the synthesis methods, modeling and evaluation of nanocomposites.

Outcome of the study:

1. To synthesize and evaluate nanostructure reinforce matrix material
2. To understand the importance of various nanomaterial matrix
3. To discuss various application including aerospace applications

Pre visit Request:

Basics of composites, properties of bulk composites

Unit-I: Introduction to Nanocomposites, Composite material, Mechanical properties of Nanocomposite material: stress - strain relationship, toughness, strength, plasticity.

Unit-II: Ceramic-Metal Nanocomposites, Ceramic based nanoporous composite, Metal matrix nanocomposites, Polymer-based nanocomposites Carbon nanotube based nanocomposites and Natural nanobiocomposites, Biomimetic nanocomposites and Biologically inspired nanocomposites.

Unit-III: Synthesis methods for various nanocomposite materials: mechanical alloying, thermal spray synthesis etc. Nano composites for hard coatings; DLC coatings; Thin film nanocomposites; Modeling of nanocomposites.

Unit-IV: Types of indentation: Oliver & Pharr, Vickers indentation process, Nano Indentation by AFM

Unit-V: Processing of polymer nanocomposites, properties of nanocomposites, Infiltration techniques, Stir mixing, Extrusion method, Intercalation and Exfoliation, Solution casting method, impregnation techniques: Hot melt impregnation, solution impregnation, spin coating.

Text books:

1. Nanocomposite Science & Technology by P.M. Ajayan, L.S. Schadler and P.V. Braun, Wiley-VCH GmbH Co.
2. Introduction to Nano Technology by Charles. P.PooleJr and Frank J. Owens; Wiley India Pvt Ltd.
3. Nanotechnology, A gentle introduction to the next big idea by Mark Ratner, Daniel Ratner Pearson education.
4. Polyoxometalate Chemistry for Nano- Composite Design

Reference books:

1. Encyclopedia of Nanotechnology by H.S.Nalwa
2. Encyclopaedia of Nano Technology by M.Balakrishnarao and K.Krishna Reddy, Vol I to X Campus books.

NT 204 POLYMER AND NANOCOMPOSITES

Objective:

This course intended to cover polymer nanocomposites, reinforcing polymer nanostructures dispersed in various matrix materials like polymers, ceramics, metals, etc.,. The subject covers mainly the synthesis methods, modeling and evaluation of polymer nanocomposites.

Outcome of the study:

4. To synthesize and evaluate polymer nanostructure reinforce matrix material
5. To understand the importance of various polymer nanomaterial matrix
6. To discuss various application including aerospace applications

Pre visit Request:

1. Basics of polymer composites, properties of bulk polymer composites

Unit-I Instructional objectives: The Objective of this course is to make students familiar with the important concept applicable to small Polymer based devices, their preparation, characterization and application.

Unit-II Introduction to nano polymer

Types of Polymer – Natural polymer, Synthetic polymers – Degradable, Non- Degradable - Nomenclature

Unit-III Chain structure and configuration: MW averages and Mw distribution – confirmation of chain – long range – short range. Sequention (Polymer and copolymer)– NMR analysis of runs, Optical, geometric, substititutional, tacticity(NMR analysis), Others – stars, rings interpenetrating, non-interpenetrating networks.

Unit-IV Kinetics of polymerization: Condensation – statistics, non stoichiometric mixtures, gels and branching α and P. Radical chain addition polymerization – Inhibition and retardation, statistics, Transdroff effect, autocatalytic, kinetic run number Entropy and Enthalpy of polymerization – ionic polymerization, living polymers and co-rdination polymerization

Unit-V Polymer solutions: Collogative properties – Boiling point and freezing point, Osmotic pressure – $M\alpha$, a) 2nd viral co-efficients, b) Instrumentation - EMW Scattering – Theory gases (Polarization) – Mw 2nd viral co-efficient means radius of gyration – turbichity, Zimm plot, P(6) scattering function – dissymmetry ration – Instrumentation - Viscosity – Definition, η , η_{rel} η_{sp} $[\eta]$ measurement, Mark Houwiuk volume – Rg - Gel permentation chromatography theory measurement equipment $[\eta_s] M_s = [\eta_y] M_y$

TEXT BOOK

1. Fundamentals of Polymer Science An introductory text second edition, Michael m. Coleman, USA.

REFERENCE BOOKS

1. Chemistry and Physics of Modern Materials. 2nd edition, John mckenzie Grant Cowie.
2. Introduction to Physical Polymer Science, L.H. Sperling. Wiley inter science.
3. Introduction to Polymer Chemistry, Prof.Dr. Ahmet Akar, 2th edition, 1989.
4. Principles of polymerization, George Odeon, John Wiley-Sons Inc., New York, 1991.
5. Polymer Chemistry, Bahattin Baysal,
6. Contemporary polymer chemistry , Harry allcock, Fred lamp and James Mark, 3rd edition, Printice Hall, 2003.

NT205 CARBON NANO STRUCTURES AND ITS APPLICATIONS

Objective: The course covers the structural and electronic properties of CNTs apart from various synthesis and characterization methods and applications.

Outcome of the study:

1. To understand the properties of CNTs as active component
2. To familiarize with controlled synthesis method
3. To identify applications of CNTs

Pre visit Request:

1. Structure of carbon chemistry and importance and difference types of carbon like diamonds, graphite etc.

Unit – I Carbon Nano structures and types of Carbon Nano tubes, growth mechanisms Mechanical reinforcements, Solid Disordered carbon Nanostructures, Nano structured crystals. Graphene, Carbon nanofibers.

Unit –II Electrical, Vibrational, Mechanical Properties of CNTs, optical properties & Raman spectroscopy of CNTs

Unit –III Carbon clusters and Fullerenes, Synthesis, Purification And Functionalization of CNTs by Flame, CVD, Laser & Arc-discharge process, Fluidized bed reactor.

Unit –IV Lithium & Hydrogen adsorption & storages, Fuel cell applications and energy storage, Chemical Sensors applications of CNTs, Nano fluid based CNT's.

Unit – V Computer applications (Nano chip), optical and telecommunication applications Nano composites, silicon Nanowires.

Text books:

1. Introduction to Nanotechnology by Charles P. Poole Jr and Frank J.Owens Wiley India Pvt Ltd.
2. Nanotechnology and Nano Electronics – Materials, devices and measurement techniques by WR Fahrner, Springer publications

Reference books:

1. Encyclopaedia of Nanotechnology by M.Balakrishna rao and K.Krishna Reddy, Vol I to X Campus books.
2. Encyclopedia of Nanotechnology by HS Nalwa
3. Nanotechnology – science, innovation and opportunity by Lynn E.Foster. Prentice Hall Pearson education.
4. Nano:The Essentials – Understanding Nano Scinece and Nanotechnology by T.Pradeep; Tata Mc.Graw Hill.

NT205 NANO TECHNOLOGY FOR ENERGY SYSTEMS

Objective:

The course covers the various energy forms, alternate and renewable energy system using nanotechnology.

Outcome of the study:

1. To cover various renewable energy technologies.
2. To study hydrogen production and storage techniques.
3. To study solar energy generation and enhancement of conversion efficiency microfluidics and fuel cell technology will be covered.

Pre visit Request:

Different technologies like Renewable energy technology, supercapacitors and Hydrogen storage technology.

Unit-I Battery: Introduction to Battery materials and batteries: Lithium Ion based batteries.

Unit-II: Super capacitors: Super capacitor characterisation, Types of super capacitors, double layer and pseudo capacitance, hybrid super capacitors, super capacitors: Electrochemical double layer and pseudocapacitors, Hybrid supercapacitors, advantages and disadvantages of electrochemical double layer, Pseudocapacitors and hybrid supercapacitors., Applications of supercapacitors.

Unit-III: Renewable energy Technology: Energy challenges, nanomaterials and nanostructures in energy harvesting, developments and implementation of nanotechnology based renewable energy technologies, solar cell structures: quantum well and quantum dot solar cells, photo- thermal cells for solar energy harvesting, Thin film solar cells, CIGS solar cells, Die sensitized solar cells.

Unit-IV Hydrogen storage Technology: Hydrogen production methods, purification, hydrogen storage methods and materials: metal hydrides and metal-organic framework materials, volumetric and gravimetric storage capacities, hydriding and dehydriding kinetics, high enthalphy formations and thermal management during hydriding reaction, multiple catalytic – degradation of sorption properties, automotive applications.

Unit-V Fuel cell Technology: Fuel cell Principles, types of fuel cells (Alkaline Electrolyte, Phosphoric acid, Molten Carbonate, solid oxide and direct methanol and Proton exchange fuel cells), Principle and operation of Proton Exchange Membrane (PEM) fuel cell, Materials and fabrication methods for fuel cell technology, micro fuel cell power sources – Biofuels, Microbial biofuels.

NT206 MEMS/NEMS DESIGN AND APPLICATIONS

Objective: The course is intended to cover deep understanding of micro and nano electromechanical systems their design and various applications as well as micro and nano fabrication techniques.

Outcome of the study:

1. To provide understanding of MEMS/NEMS applications specially sensors, Micro machining tools etc.,
2. To provide silicon micro fabrication techniques etc.,
3. To bring out scaling and packaging issues of physical system

Pre visit Request:

1. Machano- electronic properties , fabrication techniques.

Unit-I: Introduction to MEMS : MEMS and NEMS – working principles- MEMS processes & features, various components of MEMS, applications and standards, micromachining, basic process tools- epitaxy, sputtering, chemical vapor deposition and spin on methods, oxidation, evaporation, lithography and etching, advanced process tools, sol gel process, EFAB

Unit-II: Materials for MEMS and Engineering aspects: Silicon, Silicon oxide and nitride, Thin metal films, Polymers, Other materials and substrates, polycrystalline materials, mechanics of Microsystems, static bending, mechanical vibrations, thermo mechanics, fracture mechanism, fatigue, stress and strain, young's modulus and modulus of rigidity, scaling laws in miniaturization.

Unit-III: MEMS Sensors, Design and processing: Micro sensors (acoustic wave sensors, biomedical sensors, chemical sensors, optical sensors, capacitive sensors, pressure sensors, thermal sensors), microactuators (thermal, piezoelectric, electrostatic actuators, micrometers, microvalves& pumps, accelerometer, microfluidics and devices), design consideration, process design and mechanical design.

Unit-IV: MEMS/NEMS Scaling issues and Packaging: Introduction – Scaling of physical systems – Mechanical system scaling, Thermal system scaling, Fluidic system scaling, Electrical system scaling, Packaging- mechanical and microsystem package, design considerations, Process steps, Diepreparation- interconnects, surface and Wafer bonding, wire bonding and scaling, 3D packaging and assembly signal Thermal management, Hermetic packaging, Electrical//Micro fluidic/and optical interconnects, Signal mapping transduction, Microfluidic technology - MEMS and NEMS technology for microfluidic devices.

Unit-V: MEMS/NEMS applications: Applications in automotive industry – health care – aerospace – industrial product consumer products – lab on chip – molecular machines – data storage devices – micro reactor – telecommunications, Servo systems.

Text Books:

1. “An introduction to Micro electro mechanical systems Engineering” by NadimMalut and Kirt Williams – Second edition – Artech House, Inc, Boston
2. “Micro electro mechanical systems Design”. / By James J Allen- CRC Press – Taylor and Francis Group
3. “Mechanics of micro electro mechanical systems “by NicolaeLobontiu and Ephrahim Garcia Kluwer. Academic Publishers – Boston
4. The Physics of Micro/Nano- Fabrication by Ivor Brodie and Julius J.Murray
5. Nano- and Micromaterials by Kaoru Ohno, Masatoshi Tanaka, Jun Takeda and Yoshijuki Kawazoe

References Books

1. “Springer Hand Book of Nano Technology “ byBharathBhushan – Springer
2. “Nano and Micro electro Mechanical systems” by Sergey Edward Lysherski – CRC Press.

NT206 LITHOGRAPHIC TECHNIQUES

Objective: The course is intended to cover deep understanding of basics and different types of lithographic techniques useful for Nanofabrication.

Outcome of the study:

1. To provide understanding of importance of lithography.
2. To bring out different types of lithographic techniques.

Pre visit Request:

1. Clean room technology, thin films coating techniques

Unit-I: Introduction to lithography and Optical lithography: Introduction to lithography-Contact, proximity printing and Projection Printing, Resolution Enhancement techniques, overlay-accuracies, Mask-Error enhancement factor (MEEF), Positive and negative photoresists.

Unit-II: Electron Lithography: Electron optics, Raster scan and Vector scan, Electron proximity / Projection Printing, Direct writing, Electron resists, Electron Beam Applications.

Unit-III: X-ray Lithography: X-ray Proximity and projection printing X-ray masks, X-ray sources, X-ray resists.

Unit-IV: Ion Lithography: Focussed ion beam – Point sources of Ion, Ion Column, Beam writing, Focused Ion Beam Lithography, Masked Ion Beam Lithography, Ion Projection Lithography.

Unit-V: Lithography based on Surface Instabilities: Wetting, De-wetting, Adhesion, Limitations, Resolution and Achievable / line widths of each of the above techniques

NT207 FABRICATION, CHARACTERIZATION & SIMULATION

(NANOHUB+QUANTUM WISE) LAB-II

Objective: Objective: The course is intended to cover understanding of nanomaterial fabrication technique and modeling.

The outcome of the study is:

1. To familiarize students about applying various material fabrication, characterization techniques and data analysis.
2. To help in understanding the theoretical modeling of semiconductor devices and quantum structures using online in- browser simulation tools.

Pre visit Request: Thin films, characterization techniques

PART-A: FABRICATION & CHARACTERIZATION

1. Preparation of the ZnO thin films by using spin coating technique
2. Preparation of the CuO thin films by using Dip coating technique
3. Preparation of the Carbon nanotubes by the CVD process
4. Preparation of the CdS thin films by using spray pyrolysis with different temperatures
5. Determination of average crystalline size and microstarin by using X-Ray diffraction Analysis.
6. Determination of average particle size and zeta potential by using Dynamic light scattering.
7. Investigation of the surface morphological studies by Atomic force microscope.
8. Calculation of band gap with error bar values by using U-V Visible spectroscopy.
9. Seed Germination.
10. Study of thermal properties by using TG/DTA analysis.
11. Humidity sensor applications
12. Measurement of ultrasonic velocity of the CuO nanofluid at room temperature by Nanofluid Interferometer
13. Basic overview and Study of Potentiodynamic electrochemical properties by using Cyclic voltammetry.
14. Flame synthesis process
15. In-house sensor testing unit chemical sensor for detection of poisonous and flammable gases

PART-B: SIMULATION (NANOHUB+QUANTUM WISE)

I. QUANTUM WISE (ATK & VNL)

1. Geometry for Transport Calculations (ATK)
2. Setting up a transport calculation with the script generator (ATK)
3. I-V Curve (ATK)
4. Building and optimizing the geometry (ATK)
5. Calculating the band structure of a SiC crystal (VNL)
6. Transmission spectrum of a graphene nanoribbon with a distortion (VNL)
7. Building a graphene nanoribbon device (VNL)

II. NANOHUB

1. BJT Lab (ABACUS)
2. Carrier Statistics Lab (ABACUS)
3. Crystal Viewer Tool (ABACUS)
4. Drift-Diffusion Lab(ABACUS)
5. MOSCap (ABACUS)
6. MOSFET (ABACUS)
7. Periodic Potential Lab (ABACUS)
8. Piece-Wise Constant Potential (ABACUS)
9. PN Junction Lab (ABACUS)
- 10.MOSFET
- 11.MOSFET Simulation
- 12.OMEN Nanowire
- 13.Intro to MOS-Capacitor Tool.
